CAUTION
Verify there is power to the opener before installing Wall Console wires and Wall Console.

CAUTION
Staples which are too tight can cut or pinch wires. Cut or pinched wires can cause the Wall Console to stop working. When using the insulated staples, make sure you fasten them only as tightly as needed to hold the wire snugly.

CAUTION
Use of any other wall control can cause the door to operate unexpectedly and the light not to work. Use only the included Wall Console.

• Wall Console location should be in direct sight of door.
• It should be at least five feet (5') above floor to prevent small children from operating door.
• It must be away from any moving parts. (You should NOT be able to reach the garage door while standing at Wall Console.)
• Wall Console board screw connections are polarized. (+) positive and (-) negative.

• Locate Wall Console pre-wired wire ends. (They should be located within the guidelines mentioned above.)
• Split and strip ends of wire.
• Fasten wire to Wall Console board screws on back of Wall Console.
– Striped wire to the + (plus) terminal.
– White wire to the - (minus) terminal.

• Pick a convenient location for mounting Wall Console using the guidelines mentioned above.
• Run wire from power head to Wall Console.
• Split and strip ends of wire.
• Fasten wire to Wall Console board screws on back of Wall Console.
– Striped wire to the + (plus) terminal.
– White wire to the - (minus) terminal.

CAUTION
Staples which are too tight can cut or pinch wires. Cut or pinched wires can cause the Wall Console to stop working. When using the insulated staples, make sure you fasten them only as tightly as needed to hold the wire snugly.

• Make wire attachments at STB's
– Splitting and stripping wire ends to be connected as shown (Fig. 3-6)
– Loosen terminal screws
– Insert wire under flat plate and tighten screw. It does not matter which wire, white or striped, goes on which terminal (Fig. 3-7)

• Make wire attachments at power head
– ProMax STB's are connected to terminals #2 and #3 on power head (Fig. 3-8)
– Standard STB's are connected to terminals #3 and #4 on power head (Fig. 3-8)

4. Check the following

- Insure that no part of door or its hardware is in path between lenses of source and sensor
- Insure that tops of lenses are between 5"-6" above the floor (Fig. 3-9). The brackets are flexible and can be adjusted slightly if needed

NOTE: STB alignment check must be performed following connection to electrical power (see page 21). DO NOT PLUG IN YET!

Safe-T-Beam® Alignment Check

After turning the electrical power on, if the STB's are not in proper alignment, the red LED (Source) will blink continuously.

To correct the problem – the brackets are flexible and can be adjusted slightly to bring the system into alignment. When the STB's are in alignment the red LED will stop blinking and stay on.

FIG. 3-9 Check lens height. Top edge of lens between 5" - 6" above floor.
